TECHNICAL SKILLS

Languages: TypeScript; JavaScript; Java; Python; C/C++; SQL; Kotlin; Groovy

Frameworks: React; Angular; Next.js; Node.js; Django; Tailwind; Unreal Engine (UMG)

Tools/AI: Git; Bash; Docker; Android Studio; Linux; Hugging Face; Meta Llama 3.1 8B

EXPERIENCE

Programmer

Sep 2022 – Present

Behaviour Interactive

- Improved friends list responsiveness by up to **98%**, reducing refresh times from **13.5s to 266ms** and incremental updates from **10s to 4.7ms** through batched processing of up to **2,000 entries**
- Lowered UI memory consumption by **~250MB** by modernizing legacy **Scaleform** interfaces into Unreal Motion Graphics (UMG)
- Streamlined UI maintenance by replacing **360 specialized** badge implementations with **4 reusable templates** supporting **90+ characters**
- Reduced memory allocations by **40%** by implementing **object pooling** and **reusable component lifecycles**
- Accelerated progression workflows by eliminating up to **860ms** of user idle time per interaction through automation of sequential actions
- Developed scalable user-facing systems for a live-service application supporting **40k+ concurrent users**

Compiler Engineer

Jan 2022 – Apr 2022

Huawei Technologies Canada

- Improved branch prediction accuracy of our **C++** Gem5 processor model by fixing premature loop exit behaviour in control-flow execution

Software Developer

May 2020 – Apr 2021

HubHead Corp.

- Automated legacy-to-cloud **data migration** by developing **Groovy-based REST API** workflows, eliminating manual record transfer processes
- Built interactive **AngularJS** web components to streamline client-facing data workflows and improve usability

PROJECTS

Restaurant Deal Aggregator | *React, Next.js, Node.js, TypeScript, PostgreSQL*

Apr 2025 – Present

- Architected a **rate-limited** web scraping pipeline using **Regex** to extract time-sensitive deals and date ranges
- Improved deal detection precision from **52% to 76%** by refining classification logic on a **200 sample** test set
- Integrated **LLM inference** via **Hugging Face** using **Llama 3.1 8B** with token-efficient prompts to generate concise deal titles, keeping API costs below **\$0.10/month**

Student Housing Website | *React, Django, Python, PostgreSQL, Firebase, Google Drive*

May 2022 – Apr 2023

- Designed a cloud-based media storage pipeline using the **Google Drive API**, offloading file storage from the database by persisting only external asset URLs to reduce bloat
- Implemented a real-time messaging system using **Firebase Cloud Firestore**, enabling live communication between students and property owners without requiring a custom WebSocket backend

Food Expiry Tracker | *Kotlin, Android Studio, Google Maps*

Jan 2023 - Apr 2023

- Implemented background notifications with **Android WorkManager** and **NotificationManager** to proactively alert users of ingredients nearing expiration
- Facilitated location-based food bank discovery via **Google Maps Intents**, streamlining food donation for users

EDUCATION

University of Waterloo

B.A.Sc. in Computer Engineering, GPA: 3.8

Sep 2018 – Apr 2023

- Distinction; Dean's Honour List*
